Stock Sector Sheet

The Stock / Sector sheet is a one page source for finding stocks to trade in your stock trading accounts, like our BlueSky and Triple Array. The sheet lists about 450 stocks divided by sector that are the current key trading vehicles for many of the big money funds.

The big funds move stock prices when they begin to buy or accumulate a position and they tend to trade the same popular equities. We like to trade the stocks that the big money funds are trading because we like our investments to move sooner than later;(time is money).

Different industry sectors also come in and out of favor with these big money funds and hence if one stock in a sector is working the other stocks are also going to be pulled up as well. This stock / sector listing helps us watch and choose stocks in which to invest.
